## Remarks:

This application was filed on 07 - 01 - 1998 as a divisional application to the application mentioned under INID code 62.

(54) **Television program delivery system**

(57) A system for delivering digital program signals from a center to subscriber locations using a satellite with a first satellite transponder, the system comprising a center, remotely located from the subscriber locations, wherein more than one digital program signal is processed for transmission to a first satellite transponder, a first cable headend, comprising a first satellite dish, wherein the digital program signals are received from the first satellite transponder; and a means, connected to the first satellite dish, for sending the digital program signals from the first cable headend to the subscriber locations; and a first terminal, located at each subscriber location, wherein the sent digital program signals are received from the first cable headend and at least one digital program signal is processed for subscriber viewing.
